1. Plan: Occurs whether you are aware of it or not
2. Collection: Collect data gathered from several databases
3. Process: Data wrangling, encryption, and compression
4. Storage: Storing the data in a file that can be used in the future
5. Analyze: Going through the data and making sure the design of the experiment is not flawed. Making early conclusions of what the data entails
6. Visualize: Create visual interpretetations for the data collected
7. Publish: Publish findings to a credible source
